

## Pegboard templates

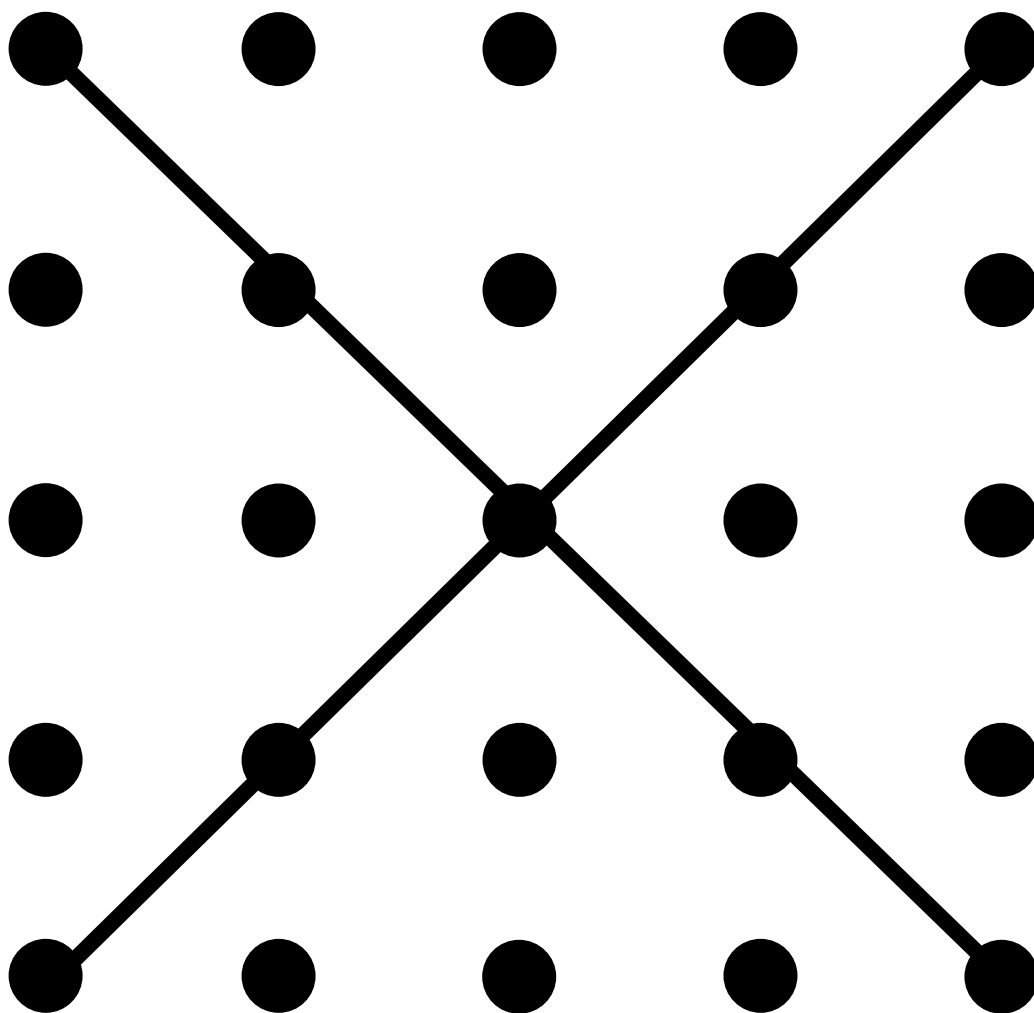

Copy the design with elastic bands on an actual pegboard or print and laminate the pages and draw the design with dry erase makers for repeated use. These pages are examples, have fun and make your own and have your child make his/her own design; empty templates at the end.

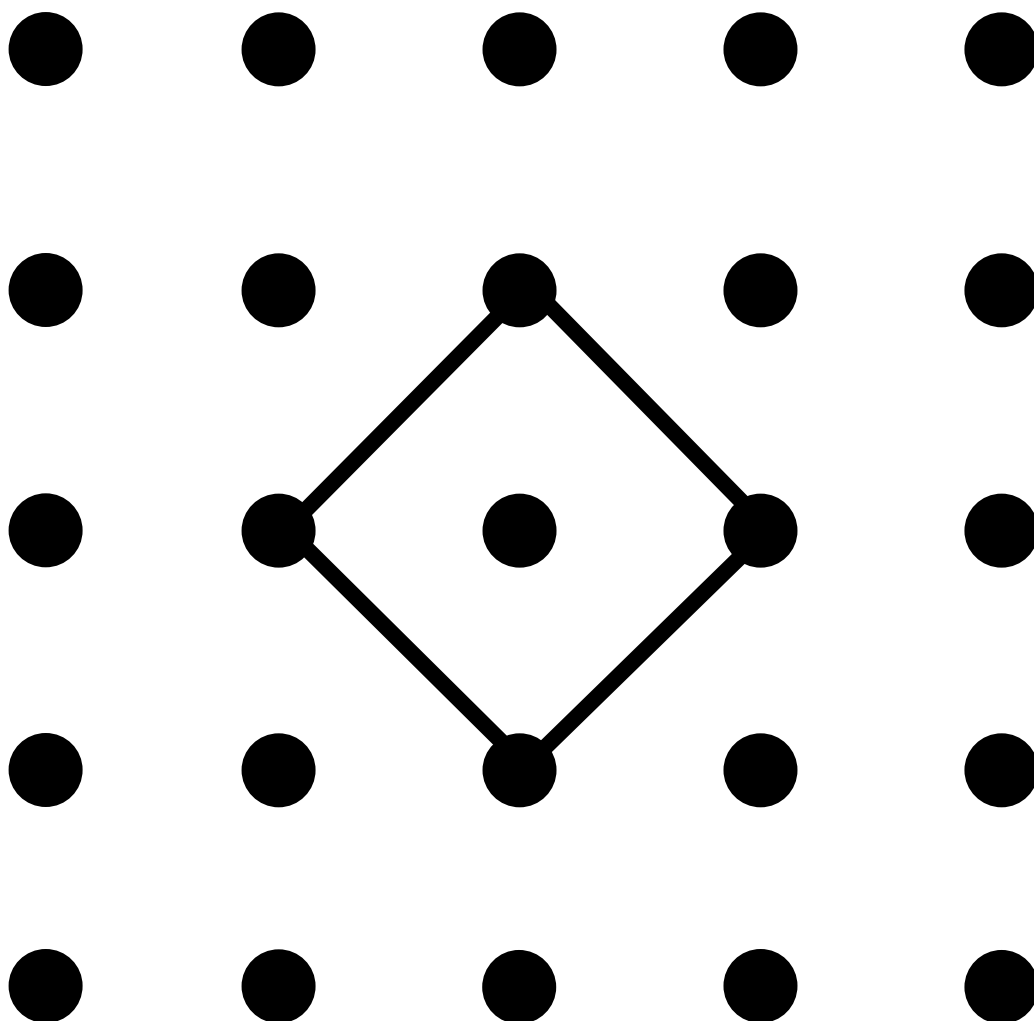

Name the shapes, draw attention to the right angles, ask your child to count how many right angles are in each design.

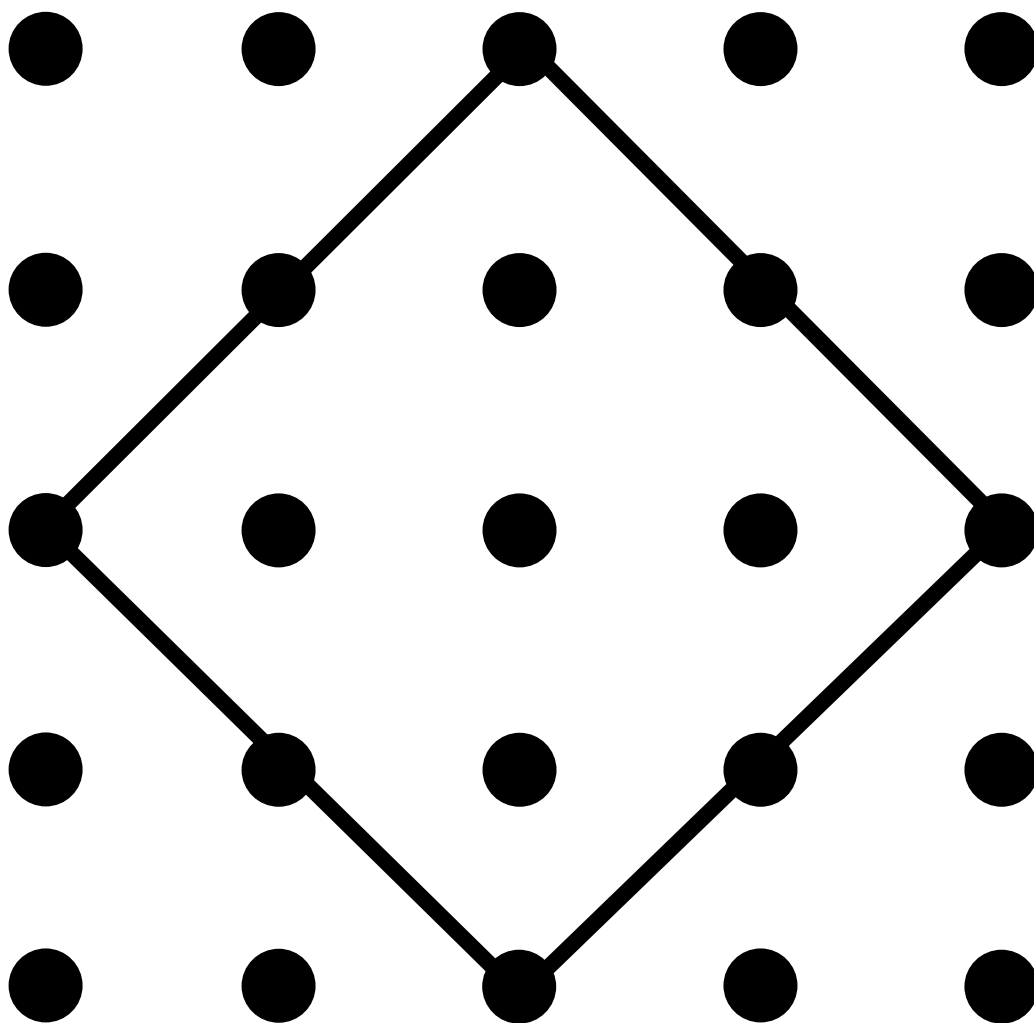

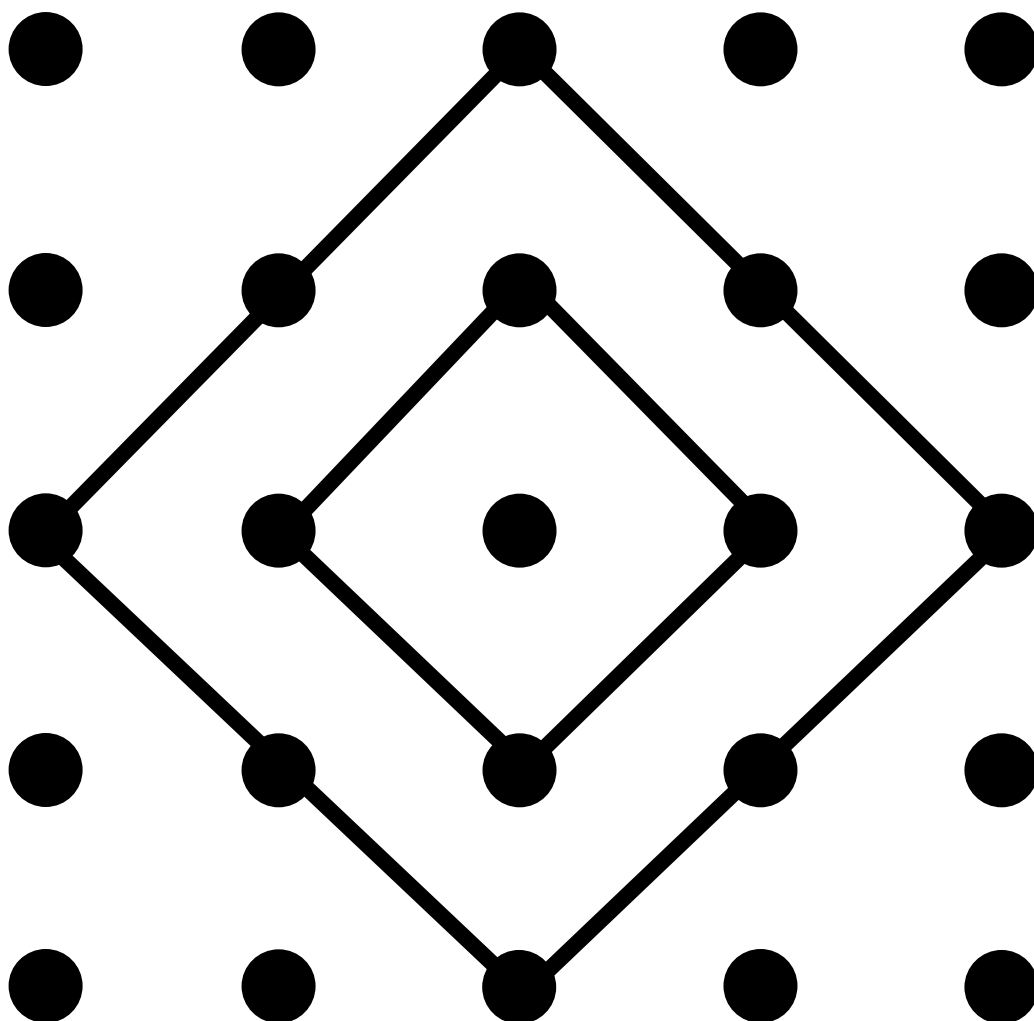

Explain that the 'tri' in triangle means three for three angles, like three wheels on a tricycle. Ask your child to point at the three angles and name the shape. Ask how s/he can make another triangle.
